Installed in: 2004

Project designed and installed by:
ESPAMODU, S.A

Project

With head offices in Paris and Houston, NextiraOne is a world leader in the provision of integrated business communication solutions and services. It was founded in April 2001 through the strategic merger of companies previously bought out by Platinum Equity, including Williams Communications Solutions (the second largest voice and data solution supplier in the US), Milgo Solutions and Timeplex, among others. It supplies technology to leading manufacturers, such as Alcatel, Cisco Systems, Genesys or Nortel Networks. It offers consulting and solution development services which range from contact centre applications to communication infrastructure outsourcing.

NextiraOne España has more than 5,000 customers. It covers the entire country and is present in 15 cities. Its head offices are in the industrial area of the Fuencarral district in the north of Madrid.

Requirements

NextiraOne occupies two floors of the building located at Calle Manuel Tovar, 49-53, laid out as follows:

- First Floor: Five offices, a meeting room and an open-plan area with operating system posts.
- Second Floor: Ten offices, a meeting room and an open-plan area with operating system posts.

Solutions

Both floors have been installed with the M82 system, seeking, on the one hand, a long-term, functional product while, on the other, keeping an eye on appearance with the Azul Fresco finish for panels, Blues for profiling and lively colours for the splice profiles, in line with NextiraOne's corporate colours. A horizontal modulation of 2,400 mm was chosen, together with B glazed modules to provide a feeling of spaciousness and natural light.

A total surface area of 725 m² of partitioning was installed: 290 m² on the first floor and 435 m² on the second.
