Installed in: 2002

Project and site management:

Mikel Garbizu

Basque Government Coordinator:

Iñaki Bilbao

Contractor: BAIO

Installed by: C.Prada

Project

The EITB group is the foremost communications group in the Basque Country. It has four television channels and five radio stations, broadcasting to more than a million people every day with programmes mainly based on local information and entertainment.

Radio Vitoria started out life in the capital of the province of Alava more than sixty years ago. The secret of its long life is the result, above all, of its commitment to public demand: politics and the economy, sports, culture, humour, entertainment, etc. Its inclusion within the EITB group lent the station greater magnitude than any other communications group in the area.

Requirements

Radio Vitoria's new installations are on the ground floor of a building on the local university campus and have a surface area of approximately 1,000 M². The floor required different spaces to be fitted out for different activities: editorial department, recording studio, management offices, meeting rooms, etc.

Solutions

Movinord's M92 Fuga demountable partition system with visible profiling and wall cover was chosen with the Azul Fresco finish on panelling and Ral 9006 on the metal frame. The installation includes a high proportion of glazed modules with blinds. Approximately 470 M² of Movinord partitioning were installed.
